

Importing password from browser to 1password

This article will show you how to import passwords from chrome or edge to 1password.

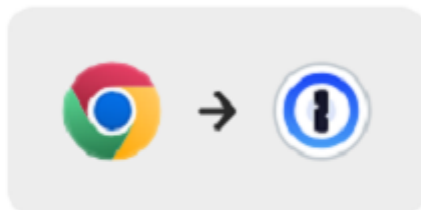

1. In the 1password app select the 3 dots at the top left corner of the screen and select "import".

2. Select your browser and click on the link. For this one we will do chrome. See below for Edge.

Chrome

ⓘ You'll need to use our web importer to import from Chrome.

Visit the following URL on a computer to import on 1Password.com.

[Open 1password.com](#)

Import

3. Follow these steps.

1Password for Puffing Billy Railway x

Import

Turn off backup software first

Before you export your data from your old password manager, temporarily turn off any backup software you may be using, so the unencrypted export file isn't backed up.

1. Click the Chrome menu in the toolbar and choose **Google Password Manager**.
2. Click **Settings** in the sidebar.
3. Click **Download file** in the "Export passwords" section.
4. Enter the password you use to log in to your computer.
5. Save the **Chrome Passwords.csv** file to your desktop.

[Back](#) [Continue](#)

4. The next will ask you to select which vault you would like to store your passwords. As these are your personal passwords select your "Employee" vault as you are the only person that can see this vault.
5. Then drag and drop the file you downloaded earlier.

and hit continue.

The screenshot shows a web browser window with the address bar displaying "https://puffingbillyrailway.1password.eu/import/chrome#code=79b3597908204b048...". The page title is "Import". At the top, there are three tabs: "Export" (checked), "Choose Vault" (checked), and "Upload" (unchecked). Below the tabs, the main heading is "Upload your data to 1Password". A blue information box contains the text: "No unencrypted data will leave your device during upload." Below this, a large dashed blue box represents the upload area. Inside this box, there is a file icon, the text "Chrome Passwords.csv", and a red "Remove file" link.

6. You can then see it in your "Employee" vault. Make sure to delete the file off your computer.

7. For Edge. Follow up to step 3. Follow these steps.
