

ZDriveTemp

Zdrivetemp has been created to allow a folder structure to be used to restrict access to areas based off group and branch. For example, the IT Team have access to an IT folder under business services but can't access any other group folder or any other branch under Business_services.

Firstly, a drive was created on the windows file server pbr-fs-b1 and the share was made to match the following permissions and inheritance disabled:

Owner: Administrators (PBR-FS-B1\Administrators) [Change](#)

Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

	Type	Principal	Access	Inherited from	Applies to
	Allow	CREATOR OWNER	Full control	None	Subfolders and files only
	Allow	SYSTEM	Full control	None	This folder, subfolders and
	Allow	Administrators (PBR-FS-B1\Administrators)	Full control	None	This folder, subfolders and

Once set the server share needed to be set so access-based enumeration is disabled. This will allow for traverse permission to be assigned to the server share:

☐ Enable access-based enumeration

Access-based enumeration displays only the files and folders that a user has permissions to access. If a user does not have Read (or equivalent) permissions for a folder, Windows hides the folder from the user's view.

☒ Allow caching of share

Caching makes the contents of the share available to offline users. If the BranchCache for Network Files role service is installed, you can enable BranchCache on the share.

☐ Enable BranchCache on the file share

BranchCache enables computers in a branch office to cache files downloaded from this share, and then allows the files to be securely available to other computers in the branch.

☐ Encrypt data access

When enabled, remote file access to this share will be encrypted. This secures the data against unauthorized access while the data is transferred to and from the share. If this box is checked and grayed out, an administrator has turned on encryption for the entire server.

Once the drive was created a DFS path was created in DFS management pointing to the share on pbr-fs-b1:

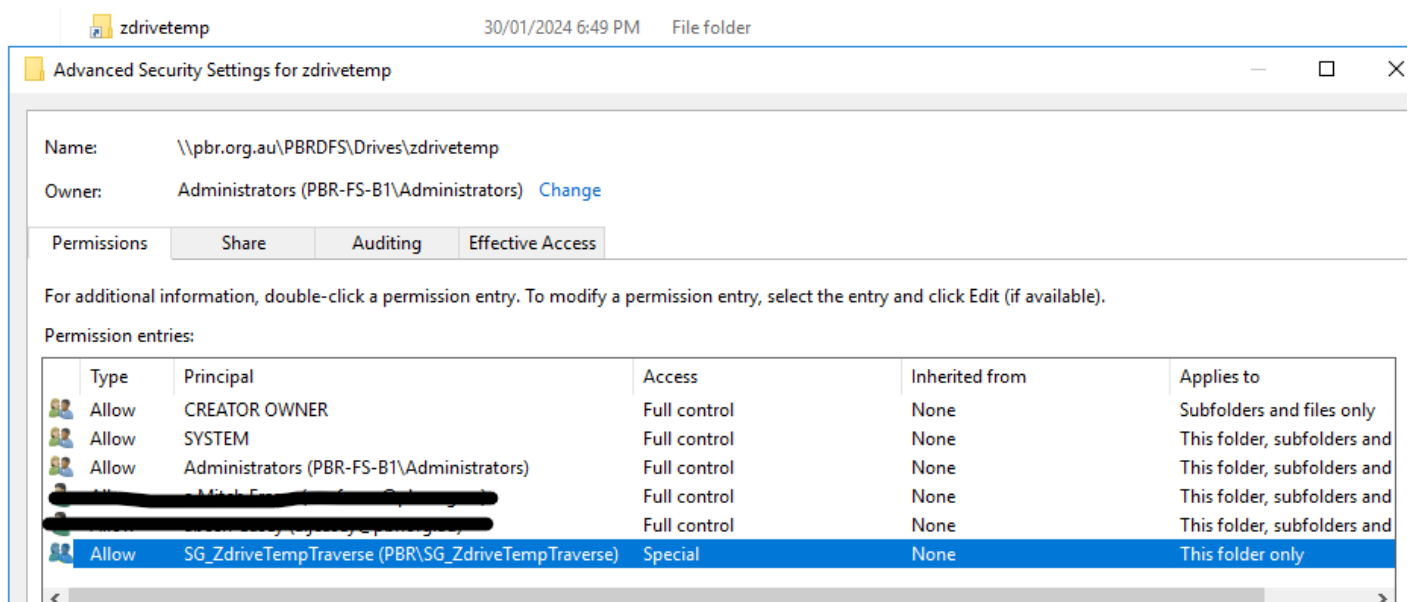

The screenshot shows the DFS Management console. On the left, the 'Namespaces' tree is expanded to show the path: \\pbr.org.au\PBRDFS > Drives > zdrivetemp. The 'zdrivetemp' drive is highlighted. On the right, the 'Folder Targets' tab is active, showing a table with 1 entry:

Type	Referral Status	Site	Path
Folder	Enabled	Belgrave	\\PBR-FS-b1\zdrivetemp

Go to AD and create a security group for traverse access to the zdrivetemp:

Once the DFS path has been created and the AD security group created for Traverse access, go to the Zdrivetemp and make sure the below groups are set. For traverse NTFS permissions these AD groups will always be set to apply to "This folder only" and have the same 4 permissions selected (see second and third image below).

Principal: **SG_ZdriveTempTraverse (PBR\SG_ZdriveTempTraverse)** [Select a principal](#)

Type: **Allow**

Applies to: **This folder only**

Basic permissions: [Show advanced permissions](#)

- ☐ Full control
- ☐ Modify
- ☐ Read & execute
- ☐ List folder contents
- ☐ Read
- ☐ Write
- ☒ Special permissions

☐ Only apply these permissions to objects and/or containers within this container

Create other folders under the zdrive temp as show below:

Network > pbr.org.au > PBRDFS > Drives > zdrivetemp				
	Name	Date modified	Type	Siz
✦	1.Business_Services	29/01/2024 4:45 PM	File folder	
✦	2.Infrastructure	29/01/2024 4:50 PM	File folder	
✦	3.Visitor_Experience	29/01/2024 4:50 PM	File folder	
✦	4.Board	29/01/2024 4:49 PM	File folder	
✦	5.CEO	24/01/2024 2:58 PM	File folder	
	Data_to_be_copied	29/01/2024 5:26 PM	File folder	

For all folders apart from 4.Board, 5.CEO and Data_to_be_Copied, there will need to have 2 AD groups assigned in the NTFS permissions. One Traverse group (allows group members to view folders) and one Modify group. Create these groups as presented below in AD:
