

How to add Gneric NFC tag to a user.

1. Get an NFC scanner app on phone like TagInfo
2. Full Scan your NFC Tag.

3. you should see an ID code in a hexi-format. Exmample above is 04:4C:50:0A:BD:1D:90, strip colons from this id to create 044C500ABD1D90

4. Convert this Hexadecimal to Decimal value = 1209806568103312
5. Open Geotab > People > Users and Drivers > Person > Open Driver Tab
6. Add Custom NFC > Click Save.

The screenshot shows the Geotab user settings page for 'Dylan Healey'. The 'Driver' tab is selected, and the 'Add new driver key' button is visible. Below the button, a table shows a 'Custom NFC' key with the value '1209806568103312'. The page also includes sections for 'USER IS A DRIVER' and 'Prevent driver access to shared data'.

Key Type	Key Value	Actions
Custom NFC	1209806568103312	 

7. This may take a little bit to be attached to the user.
8. When the user taps to login inside the vehicle, it wont update in Geotab until the device communicates. This can take 5-40 minutes, depending if the car is idle etc.

When the user turns the vehicle off it will log them out, they will need to tap on EVERY time they get into a vehicle.
