

How to: Send a Pre-recorded Message (Training)

Currently there is only 1 Audio Zone at Emerald Station. Due to this zone control for the announcement is not required.

1. Firstly you can choose to delay in the announcement with the "**select pre-message delay**" field.

2. Select a message that you would like to broadcast in the "**Select Messages**" panel. Once the message is selected "**Start Messages**" is then selected to start the broadcast.

3. if you need to adjust the volume you can use the **Message** slider under **Audio Levels**
