

Signature 365 - Excluding users from getting signatures

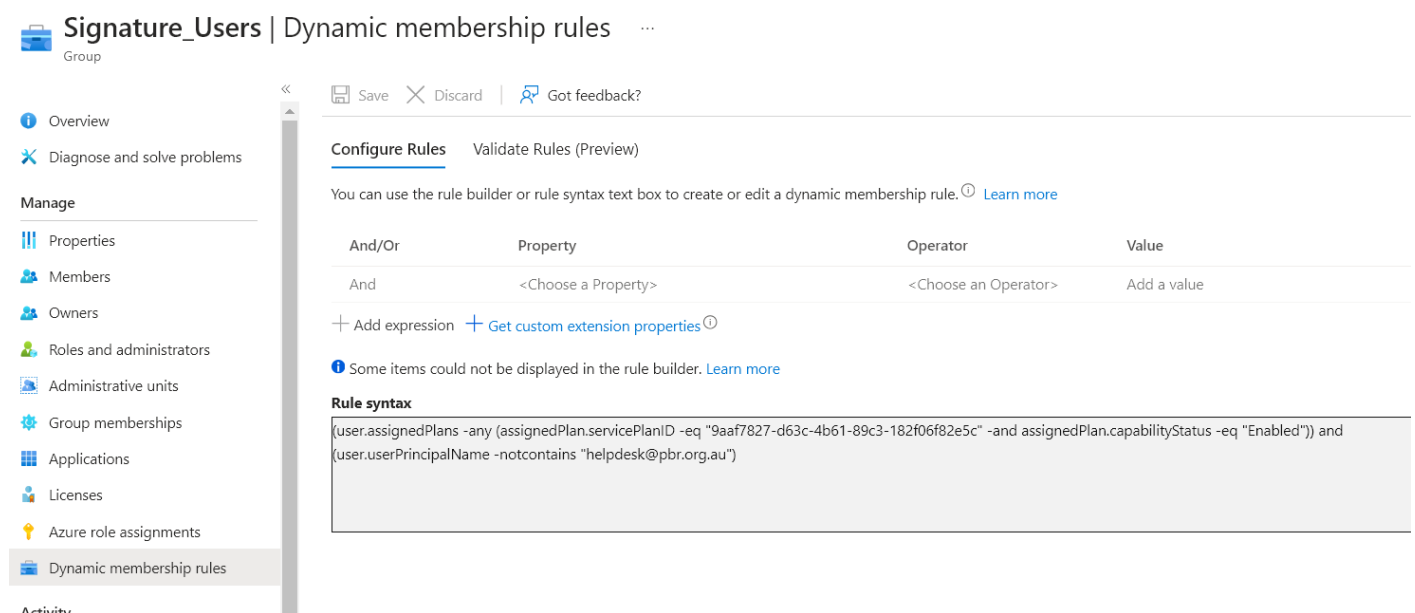

If you need to exclude a user who has been assigned a 365 mail enable license (and thus are added dynamically to the **Signature_Users** group) from getting an email signature.

Log into the Microsoft Entra Admin center

Navigate to the **Signature_Users** group

Under Dynamic Membership Rules

You need to add the users email address after the -notcontains command. As can be seen below where the helpdesk@pbr.org.au email address has been excluded from getting email signatures

The screenshot shows the 'Signature_Users' group page in the Microsoft Entra Admin Center. The left sidebar lists various management options, with 'Dynamic membership rules' selected. The main area displays the 'Configure Rules' tab for the group. A table shows the rule configuration with columns for 'And/Or', 'Property', 'Operator', and 'Value'. The rule is configured to exclude users whose email address is 'helpdesk@pbr.org.au'.

And/Or	Property	Operator	Value
And	<Choose a Property>	<Choose an Operator>	Add a value

Below the table, there is a 'Rule syntax' section showing the following rule definition:

```
(user.assignedPlans -any (assignedPlan.servicePlanID -eq "9aaf7827-d63c-4b61-89c3-182f06f82e5c" -and assignedPlan.capabilityStatus -eq "Enabled")) and (user.userPrincipalName -notcontains "helpdesk@pbr.org.au")
```

At the time of writing the **-notin** command was not able to be used to reference another group in AAD.. Thus it is not possible to create a **No-Signatures** Group and put all users who are licensed but don't need a signature in the group to exclude them. This would be a MUCH cleaner way to do this. Hopefully Microsoft will look to add this functionality in the future.
